EXAMINER'S AMENDMENT

1. This is in response to the Election/Restriction Requirement filed 4/8/2008. Applicant elects claims 6-9 for examination.
2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Richard J. Gregson (the Undersigned Attorney, Reg. No.41,804) on 8/1/2008.

The application has been amended as follows:

IN THE CLAIMS:

Please **amend** claims as follows:

6. (Currently Amended) A data management component for tracking a plurality of Network Interface Card (NIC) connections resident on a computing system, wherein said computing system employs Virtual Interface Architecture (VIA) for data communications from a VIA enabled software application on said computing system with data destinations other than said VIA enabled software application wherein a path for said data communications is through at least one Network Interface Card (NIC) with at least one port connection per each NIC, said data management component comprising:

a Physical NIC data structure for keeping data needed and used to manage each instance of a NIC,

a Logical NIC data area useable by a Kernel Agent on said computer system to manage a plurality of logical NIC objects made visible to the Virtual Interface Provider Library and to the Application program, including a link to all Physical NICs for devices within said Logical NIC, said Logical NIC having a Master Completion Queue through which all completions for all Physical NICS associated with said Logical NIC,

a protection tag table data structure for storing locally unique protection tag for each application, providing that each protection tag is a unique value within a NIC so that only one application's privileges are related to any one of said protection tags.

7. (Original) The data management system of claim 6 wherein the protection tag table, and a memory registration table are data structure components of said Logical NIC data area.

8. (Original) The data management system of claim 7 wherein a completion queue notification request area (CQNRA) is set up for each Logical NIC, so that the CQNRA can be responsive to completions of any master completion queue associated with any Physical NIC.

9. (Original) The data management system of claim 8 wherein a failure of any NIC device within a logical NIC of said computer system is not visible to an application program on said computer system with said data management system is using said Logical NIC so long as an additional NIC device is operational.

Allowable Subject Matter

3. Claims 6-9 are allowed.

Reason for allowance

4. The following is an examiner's statement of reasons for allowance:

The above mention claims are allowable over the prior art of record does not appear to each or render obvious the claimed limitations in combination with the specific added limitations as recited in independent claims and subsequent dependent claims. None of the cited prior art discloses or teaches a data management component for tracking a plurality of NIC connections resident on a computing system which employs VIA for data communications from a VIA enabled software application on said computing system with data destinations other than said VIA enabled software application comprising a combination of: a Logical NIC data area useable by a Kernel Agent on said computer system to manage a plurality of logical NIC objects made visible to the Virtual Interface Provider Library and to the Application program, including a link to all Physical NICs for devices within said Logical NIC, said Logical NIC having a Master Completion Queue through which all completions for all Physical NICS associated with said Logical NIC, a protection tag table data structure for storing locally unique protection tag for each application, providing that each protection tag is a unique value within a NIC so that only one application's privileges are related to any one of said protection tags.
